

INSTRUCTIONS

LEARNING PLANNER

IT'S TIME TO PLAN OUT THE UPCOMING LEARNING PERIOD.

This planner will help you decide what you are going to teach over the next 6 weeks.

Step 1: Print out the number of planning sheets you need (number of subjects times the number of students): for example, 4 subjects x 3 students = 12 planning sheets.

Step 2: Write in the learning period and subject in the top right hand corner.

Step 3. List the topics you want to cover over the next 6 weeks. State standards, a pacing guide from your school, or even a textbook can be great places to get ideas for topics.

Step 4: List any activities or events you want to go to related to your topics.

Step 5: List out what you want to work on each week; include chapters, projects, and activities.

Step 6: Use this sheet for reference when you assign school work, are planning out your week, and to communicate progress with your teacher. This sheet can be helpful when it's time to turn in work samples or submit grades.

Most academic years are 36 weeks long (6 learning periods each 6 weeks long). How often you plan, depends on what works best for you. Some families like having the whole year mapped out. Others prefer to plan a semester at a time. While still others like the flexibility of planning each learning period. These sheets will work for whichever style works best for you.
